Key Takeaways for "Generative AI with Vertex AI: Build a Customer Chatbot"

Task 2

- Shapely is not a required python module to install for Google Colab
- The parameters are configurable and can be changed to get better results

Task 3

- The classified labels in the training set are ones that will show for any input test. In other words any input data will be classified into one of the classified labels unless an unknown label is added.

Task 4

- Model classification can be wrong, it is important to double check.
- Lambda can be used to apply a model on all row entries in a csv at once.

Task 5

- The model used is chat-bison instead of text-bison of classification and summarization.
